Evidence of Teaching Report

Student: **Demo Student**

This report illustrates the progress and development of this student **Demo Student** with regards to the following test(s). The student took the evaluation test(s) multiple times and the findings are displayed below.

Test Name: **ADWN-002 - Addition With Whole Numbers - 002**

Error Codes:

ADWN-9999 - ADWN - Incorrect response with undiagnosable error pattern.

ADWN-B - Sum is zero or one when one of addends is zero. Student writes one because "something was added"

ADWN-C - Student adds all digits together as one number regardless of place value

ADWN-D - Student adds single digit to all digits regardless of place value

ADWN-E - Student only added digits in one column and ignored rest of place values

ADWN-F - Student changes or reversed place value in sum

ADWN-G - Adds left to right without proper regrouping

ADWN-H - Student counted number of zeros and wrote those in answer

ADWN-I - Adding zero, Student will record zero rather than the sum of the digit and zero

ADWN-J - When adding zero, student will add a one in place of zero thinking zero has value

ADWN-K - Student fails to regroup properly

ADWN-L - When writing a place value sum greater than 9, the student will not regroup and just writes the entire two digit sum

ADWN-M - When writing a place value sum greater than 9, the student will add a ten instead of just a single digit

ADWN-O - Horizontal to Vertical regroup problems caused by misalignment of columns
